Health and safety information

Always comply with the following precautions and usage tips to avoid dangerous situations and ensure peak performance of your camera.

⚠️ **Warning**—situations that could cause injury to yourself or others

Do not disassemble or attempt to repair your camera. This may result in electric shock or damage to the camera.

Do not use your camera near flammable or explosive gases and liquids. This may cause a fire or explosion.

Do not insert flammable materials into the camera or store these materials near the camera. This may cause a fire or electric shock.

Do not handle your camera with wet hands. This may result in electric shock.

Prevent damage to subjects’ eyesight. Do not use the flash in close proximity (closer than 1 m/3 ft) to people or animals. If you use the flash too close to your subject’s eyes, this can cause temporary or permanent eyesight damage.

Keep your camera away from small children and pets. Keep your camera and all accessories out of the reach of small children and animals. Small parts may cause choking or serious injury if swallowed. Moving parts and accessories may present physical dangers as well.

Do not expose the camera to direct sunlight or high temperatures for an extended period of time. Prolonged exposure to sunlight or extreme temperatures can cause permanent damage to your camera’s internal components.

Avoid covering the camera or charger with blankets or clothes. The camera may over-heat, which may distort the camera or cause a fire.

If liquid or foreign objects enter your camera, immediately disconnect all power sources such, as the battery or charger, and then contact a Samsung service center.
Health and safety information

**Caution**—situations that could cause damage to your camera or other equipment

Remove the batteries from your camera when storing it for an extended period of time.

Installed batteries may leak or corrode over time and cause serious damage to your camera.

Use only authentic, manufacturer-recommended, Lithium-ion replacement batteries. Do not damage or heat the battery. This may cause a fire or personal injuries.

Use only Samsung-approved batteries, chargers, cables and accessories.

- Unauthorized batteries, chargers, cables or accessories can cause batteries to explode, damage your camera, or cause injury.
- Samsung is not responsible for damages or injuries caused by unapproved batteries, chargers, cables or accessories.

Do not use batteries for unintended purposes. This may cause a fire or electric shock.

Do not touch the flash while it fires. The flash is very hot when fired and may burn your skin.

When you use AC charger, turn off the camera before you disconnect the power to the AC charger. Failing to do so may result in fire or electric shock.

Disconnect chargers from power sources when not in use. Failing to do so may result in fire or electric shock.

Do not use a damaged power supply cord, plug, or loose outlet when you charge batteries. This may cause a fire or electric shock.

Do not allow the AC charger to come in contact with the +/- terminals on the battery. This may cause a fire or electric shock.
Do not force the camera’s parts or apply pressure to the camera.
This may cause your camera to malfunction.

Exercise caution when you connect cables or adapters and install batteries and memory cards.
If you force the connectors, improperly connect cables, or improperly install batteries and memory cards, you can damage ports, connectors, and accessories.

Keep cards with magnetic strips away from the camera case.
Information stored on the card may be damaged or erased.

Never use a damaged charger, battery, or memory card.
This may result in electric shock or camera malfunction or cause a fire.

Check that the camera is operating properly before use.
The manufacturer takes no responsibility for any loss of files or damages that may result from camera malfunction or improper use.

You must plug the end of the cable with the indicator light (▲) into your camera.
If the cable is reversed, it may damage your files. The manufacturer is not responsible for any loss of data.

Organization of the user manual

Basic functions 11
Learn about your camera’s layout, icons, and basic functions for shooting.

Extended functions 28
Learn how to take a photo by selecting a mode and how to record a video or voice memo.

Shooting options 40
Learn about the options you can set in shooting mode.

Playback/Editing 61
Learn how to play back photos, videos, or voice memos and edit photos or videos. You will also learn how to connect your camera to your photo printer or TV.

Settings 83
Refer to options to configure your camera’s settings.

Appendixes 89
Refer to error messages, specifications, and maintenance tips.

Expressions used in this manual

Pressing the shutter

- **Half-press** [Shutter]: Press the shutter halfway down.
- **Press** [Shutter]: Press the shutter all the way down.

![Half-press Shutter](image1.png) ![Press Shutter](image2.png)

Subject, background, and composition

- **Subject**: The main object of a scene, such as a person, animal, or still life.
- **Background**: The objects around the subject.
- **Composition**: The combination of a subject and background.

![Subject, background, and composition](image3.png)

Exposure (Brightness)

The amount of light that enters your camera determines the exposure. You can alter the exposure with shutter speed, aperture value, and ISO speed. By altering the exposure, your photos will be darker or lighter.

![Normal exposure](image4.png) ![Overexposure (too bright)](image5.png)
### Basic troubleshooting
You can get answers to common questions. Solve problems easily by setting shooting options.

<table>
<thead>
<tr>
<th>Issue</th>
<th>Solution</th>
</tr>
</thead>
</table>
| The subject's eyes appear red. | This is caused by a reflection from the camera flash.  
  - Set the flash option to Red-eye or Red-eye Fix. (p. 43)  
  - If the photo has already been taken, select Red-eye Fix in the edit menu. (p. 72) |
| Photos have dust spots. | Dust particles floating in the air may be captured in photos when using the flash.  
  - Turn off the flash or avoid taking photos in a dusty place.  
  - Set ISO speed options. (p. 44) |
| Photos are blurred. | This may be caused by taking photos in low light conditions or holding the camera incorrectly.  
  - Press [Shutter] halfway down to make sure the subject is focused. (p. 26)  
  - Use the mode. (p. 25) |
| Photos are blurred when shooting at night. | As the camera tries to let in more light, the shutter speed slows. This can make it difficult to steady the camera and may result in camera shake.  
  - Select Night in the mode. (p. 34)  
  - Turn on the flash. (p. 43)  
  - Set ISO speed options. (p. 44)  
  - Use a tripod to prevent your camera from shaking. |
| Subjects come out too dark because of backlighting. | When the light source is behind the subject or when there is a high contrast between the light and dark areas, the subject may come out shaded.  
  - Avoid shooting with the sun behind your subject.  
  - Select Backlight in the mode. (p. 30)  
  - Set the flash option to Fill in. (p. 43)  
  - Set the Auto Contrast Balance (ACB) option. (p. 53)  
  - Adjust the exposure. (p. 53)  
  - Set the metering option to Spot if a bright subject is in the center of the frame. (p. 54) |
Quick reference

Taking photos of people

- mode > Object Highlight ▶ 33
- mode > Beauty Shot ▶ 32
- Red-eye, Red-eye Fix (to prevent or correct red-eye) ▶ 43
- Face Detection ▶ 48

Taking photos at night or in the dark

- mode > Night ▶ 34
- mode > Sunset, Dawn ▶ 30
- Flash options ▶ 43
- ISO speed (to adjust the sensitivity to light) ▶ 44

Taking action photos

- Continuous, Motion Capture ▶ 56

Taking photos of text, insects, or flowers

- mode > Text ▶ 30
- Macro, Auto Macro (to take close-up photos) ▶ 45
- White Balance (to change the color tone) ▶ 54

Adjusting the exposure (brightness)

- EV (to adjust exposure) ▶ 53
- ACB (to compensate for subjects against bright backgrounds) ▶ 53
- Metering ▶ 54
- AEB (to take three photos of the same scene with different exposures) ▶ 56

Applying a different effect

- mode > Magic Frame ▶ 31
- Smart filter effects ▶ 57
- Image adjustment (to adjust saturation, sharpness, or contrast) ▶ 60

Reducing camera shake

- Optical Image Stabilization (OIS) ▶ 25
- mode ▶ 34

Unpacking
Check your product box for the following items.

- Camera
- AC adapter/USB cable
- Rechargeable battery
- Strap
- User Manual CD-ROM
- Quick Start Manual

Optional accessories
- Camera case
- Memory card/Memory card adapter
- AV cable
- Battery charger

The illustrations may differ from your actual items.
Camera layout

Before you start, familiarize yourself with your camera’s parts and their functions.

- **Shutter button**: Used in Shooting mode.
- **POWER button**: Turns the camera on or off.
- **Flash**: Assists in low-light conditions.
- **Microphone**: Records audio.
- **Lens**: Takes photos.
- **AF-assist light/timer lamp**: Helps in low-light conditions.
- **Speaker**: Plays back audio.
- **Zoom button**:
  - Zooms in or out in Shooting mode.
  - Zooms in on part of a photo or views files as thumbnails in Playback mode.
  - Adjusts volume in Playback mode.
- **Tripod mount**: Used for stability.
- **Battery chamber cover**: Insert a memory card and battery.
Camera layout

**Status lamp**
- **Blinking**: When the camera is saving a photo or video, being read by a computer or printer, or out of focus.
- **Steady**: When the camera is connecting to a computer or in focus.

**Mode button**: Open the list of shooting modes

Inserting the battery and memory card

Learn to insert the battery and an optional memory card into the camera.

Insert a memory card with the gold-colored contacts facing up.

Insert the battery with the Samsung logo facing up.

Removing the battery and memory card

Push the card gently until the card disengages from the camera, and then pull it out of the slot.

Push the lock up to release the battery.

- You can use the internal memory as a temporary storage device when the memory card is not inserted.
- Insert a memory card in the correct direction. Inserting a memory card in the wrong direction may damage your camera and memory card.
Charging the battery and turning your camera on

Charging the battery
Before using the camera for the first time, you must charge the battery. Attach the USB cable to the AC adapter, and then plug the end of cable with the indicator light into your camera.

Turning on your camera
Press [POWER] to turn your camera on or off.
• The initial setup screen appears when you turn on the camera for the first time. (p. 17)

Turning on your camera in Playback mode
Press [ ]. The camera turns on and accesses Playback mode immediately.

Indicator light
• Red: Charging
• Green: Fully charged

When you turn on your camera by pressing and holding [ ] for about 5 seconds, the camera does not emit any camera sounds.
Performing the initial setup

The initial setup screen appears to allow you to configure the camera's basic settings.

1. Press [POWER].
   - The initial setup screen appears when you turn on the camera for the first time.
2. Press [OK] to select Language and press [OK].

3. Press [DISP] or [OK] to select a language and press [OK].
4. Press [DISP] or [OK] to scroll to Time Zone and press [OK].
5. Press [DISP] or [OK] to select a time zone and press [OK].
   - To set the daylight-saving time, press [DISP].
6. Press [DISP] or [OK] to select Date/Time Set and press [OK] or [OK].
7. Press [DISP] or [OK] to select an item.
8. Press [DISP] or [OK] to set the date and time and press [OK].
9. Press [DISP] or [OK] to select Date Type and press [OK] or [OK].
10. Press [DISP] or [OK] to select a date format and press [OK].
11. Press [MENU] to switch to the Shooting mode.
**Learning icons**

The icons displayed will change according to the mode you select or the options you set.

Selecting options

You can select options by pressing [MENU], and then using the navigation buttons ([DISP], [ ], [ ], [ ]).

- You can also access shooting options by pressing [Fn], but some options are not available.

1. In Shooting mode, press [MENU].

2. Use the navigation buttons to scroll to an option or menu.
   - To move up or down, press [DISP] or [ ].
   - To move left or right, press [ ] or [ ].

3. Press [OK] to confirm the highlighted option or menu.

**Going back to the previous menu**

Press [MENU] again to go back to the previous menu.

- Half-press [Shutter] to return to the Shooting mode.
Selecting options

Example: Selecting a White Balance option in the P mode

1. In Shooting mode, press [MODE].
2. Press [DISP] or [ ] to scroll to Program, and then press [OK].

   ![Menu Screen]

   This mode allows you to directly set various features for shooting.

3. Press [MENU].

4. Press [DISP] or [ ] to scroll to Shooting, and then press [ ] or [OK].

5. Press [DISP] or [ ] to scroll to White Balance, and then press [ ] or [OK].

   ![White Balance Menu]

6. Press [ ] or [ ] to scroll to a White Balance option.

7. Press [OK].
Setting the display and sound

Learn how to change the basic display and sound settings.

Changing the display type

Select a display type for Shooting or Playback mode. Each type displays different shooting or playback information.

Press [DISP] repeatedly to change a display type.

<table>
<thead>
<tr>
<th>Modes</th>
<th>Display Type Choices</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shooting</td>
<td>• Display all information about shooting</td>
</tr>
<tr>
<td></td>
<td>• Hide information about shooting, except the available number of photos (or available recording time) and the battery icon</td>
</tr>
<tr>
<td>Playback</td>
<td>• Display all information about the current photo</td>
</tr>
<tr>
<td></td>
<td>• Hide all information about the current file</td>
</tr>
<tr>
<td></td>
<td>• Display information about the current file, except the shooting settings and captured date</td>
</tr>
</tbody>
</table>

Setting the sound

Set whether your camera emits a specified sound when you operate your camera.

1. In Shooting or Playback mode, press [MENU].

2. Select Sound → Beep Sound → an option.

<table>
<thead>
<tr>
<th>Options</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>The camera does not emit any sounds.</td>
</tr>
<tr>
<td>1/2/3</td>
<td>The camera emits one of three sounds, depending on the option you select.</td>
</tr>
</tbody>
</table>
Taking photos

Learn basic actions to take photos easily and quickly in the Smart Auto mode.

1 In Shooting mode, press [MODE].

2 Press [DISP] or [x] to scroll to Smart Auto, and then press [OK].

3 Align your subject in the frame.

4 Half-press [Shutter] to focus.
   • A green frame means the subject in focus.
   • A red frame means the subject is out of focus.

5 Press [Shutter] to take a photo.

See page 26 for tips to get clearer photos.
Taking photos

Zooming
You can shoot close-up photos by adjusting the zoom. Your camera has a 10X optical zoom, 2X Intelli zoom, and 5X digital zoom. Intelli zoom and digital zoom cannot be used at the same time.

- The Digital zoom is not available with the Smart Filter effect or Tracking AF option.
- If you capture a photo with the Digital zoom, the photo quality may deteriorate.

available zoom ratio for videos differs from photo zoom ratio.
Taking photos

**Intelli zoom**

If the zoom indicator is in the Intelli range, your camera is using the Intelli zoom. Photo resolution varies according to the zoom rate if you use the Intelli zoom. By using both the optical zoom and Intelli zoom, you can zoom in up to 20 times.

- The Intelli zoom is not available with a Smart Filter effect or Tracking AF option.
- The Intelli zoom is available only when you set a 4:3 ratio resolution. If you set another resolution ratio with Intelli zoom on, the Intelli zoom will be turned off automatically.
- Intelli zoom helps you capture a photo with less quality deterioration than the digital zoom. However, the photo quality may be lower than when you use the optical zoom.

### Setting Intelli zoom

1. In Shooting mode, press [MENU].
2. Select **Shooting → Intelli Zoom** → an option.

<table>
<thead>
<tr>
<th>Options</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>Deactivate the Intelli zoom.</td>
</tr>
<tr>
<td>On</td>
<td>Activate the Intelli zoom.</td>
</tr>
</tbody>
</table>
Reducing camera shake (OIS)

Reduce camera shake optically in Shooting mode.

Before correction  After correction

1. In Shooting mode, press [MENU].
2. Select **Shooting → OIS →** an option.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>Off</strong>: Deactivate the OIS function.</td>
</tr>
<tr>
<td></td>
<td><strong>On</strong>: Activate the OIS function.</td>
</tr>
</tbody>
</table>

- OIS may not function properly when:
  - you move your camera to follow a moving subject
  - you use zoom
  - there is too much camera shake
  - the shutter speed is slow (e.g., when in the ** mode)
  - the battery is low
  - you take a close-up shot
- If you use the OIS function with a tripod, your images may be blurred by the vibration of the OIS sensor. Deactivate the OIS function when you use a tripod.
- If the camera is hit or dropped, the display will be blurry. If this occurs, turn off the camera, and then turn it on again.
- In some scene modes, the OIS function is unavailable.
Tips for getting a clearer photo

😊 Holding your camera correctly
Make sure nothing is blocking the lens.

😊 Half-pressing the shutter button
Half-press [Shutter] and adjust the focus. The camera adjusts the focus and exposure automatically.

The camera sets the aperture value and shutter speed automatically.

Focus frame
- Press [Shutter] to take the photo if the focus frame appears in green.
- Change the composition and half-press [Shutter] again if the focus frame appears in red.

😊 Reducing camera shake
- Set the Optical Image Stabilization option to reduce camera shake optically. (p. 25)
- Select the mode to reduce camera shake both optically and digitally. (p. 34)

😊 When 🧐 is displayed
When shooting in the dark, avoid setting the flash option to Slow Sync or Off. The aperture remains open longer and it may be harder to hold the camera still.
- Use a tripod or set the flash option to Fill in. (p. 43)
- Set ISO speed options. (p. 44)
Preventing your subject from being out of focus

It may be difficult to get your subject in focus when:
- there is little contrast between the subject and background
  (for example, when your subject is wearing clothing that is similar in color to the background)
- the light source behind the subject is too bright
- the subject is shiny or reflective
- the subject includes horizontal patterns, such as blinds
- the subject is not positioned in the center of the frame

Use the focus lock

Half-press [Shutter] to focus. When the subject is in focus, you can reposition the frame to change the composition. When you are ready, press [Shutter] to take your photo.

• When you take photos in low light
  Turn on the flash. (p. 43)

• When subjects are moving fast
  Use the continuous or motion capture function. (p. 56)
Extended functions

Learn how to take a photo by selecting a mode and how to record a video or voice memo.

Shooting modes

Take photos or record videos by selecting the best shooting mode for the conditions.

Using the Smart Auto mode

In this mode, your camera automatically chooses the appropriate camera settings based on the type of scene it detects. Smart Auto Mode is helpful if you are not familiar with the camera settings for various scenes.

1. In Shooting mode, press [MODE].
2. Select Smart Auto.
3. Align your subject in the frame.
   - The camera selects a scene automatically. An appropriate scene mode icon appears at the top left of the screen. The icons are listed below.

<table>
<thead>
<tr>

</tr>
<tr>
<td>🎆</td>
<td>Appears when taking photos of fireworks. This is available only when you use a tripod.</td>
</tr>
</tbody>
</table>
Shooting modes

4 Half-press [Shutter] to focus.

5 Press [Shutter] to take the photo.

- If the camera does not recognize a proper scene mode, appears and the camera uses default settings.
- Even if it detects a face, the camera may not select a portrait mode depending on the subject’s position or lighting.
- The camera may not select the correct scene depending on the shooting conditions, such as camera shake, lighting, and distance to the subject.
- Even if you use a tripod, the camera may not detect the mode depending on the subject’s movement.
- In mode, the camera consumes more battery power, because it changes settings often to select appropriate scenes.

Using the Scene mode

Take a photo with options preset for a specific scene.

1 In Shooting mode, press [MODE].

2 Select Scene → a scene.

- To change the scene mode, press [MODE], and then select Scene → a scene.
- For the Magic Frame mode, see “Using the Magic Frame mode” on page 31.
- For the Beauty Shot mode, see “Using the Beauty Shot mode” on page 32.
- For the Object Highlight mode, see “Using the Object Highlight mode” on page 33.
- For the Night mode, see “Using the Night mode” on page 34.
Using the Magic Frame mode

In Magic Frame mode, you can apply various frame effects to your photos. The shape and the feel of the photos will change according to the frame you select.

1. In Shooting mode, press [MODE].
2. Select Scene → Magic Frame.
3. Press [MENU].
4. Select Shooting → Frame → an option.

5. Align your subject in the frame, and then half-press [Shutter] to focus.

6. Press [Shutter] to take the photo.

- In Magic Frame mode, the resolution is automatically set to [23].
- When you connect your camera to a TV in Magic Frame mode, it automatically switches to Playback mode. You cannot capture photos in Playback mode.
Using the Beauty Shot mode
Take a photo of a person with options to hide facial imperfections.

1. In Shooting mode, press [MODE].
2. Select Scene → Beauty Shot.
3. To make the subject’s skin tone appear lighter (face only), press [MENU], and then go to Step 4. To hide facial imperfections, press [MENU], and then go to Step 5.
4. Select Shooting → Face Tone → an option.
   • Select a higher setting to make skin tone appear lighter.
5. To hide facial imperfections, press [MENU].
6. Select Shooting → Face Retouch → an option.
   • Select a higher setting to hide a greater number of imperfections.
7. Align your subject in the frame, and then half-press [Shutter] to focus.
8. Press [Shutter] to take the photo.

The focus distance will be set to Auto Macro.
Using the Object Highlight mode

Object Highlight mode makes the subject more distinguishable by adjusting the depth of field.

1. In Shooting mode, press [MODE].

2. Select Scene → Object Highlight.

3. Position the camera according to the optimum distance displayed on the screen.
   - The optimum distance will vary, based on the zoom ratio you use.

4. Press [MENU].

5. Select Shooting → Object Highlight Effect.

6. Select an option to adjust Blur or Tone.
   - **Blur:** The higher the value, the more intense the blur effect in the photo.
   - **Tone:** The higher the value, the brighter the photo.

   - When the camera can apply the object highlight effect, ( ) will appear.
   - When the camera cannot apply the object highlight effect, ( ) will appear. If this occurs, adjust the distance from the camera to the subject.

8. Press [Shutter] to take the photo.

- Available resolutions in Object Highlight mode are ( ).
- If the shooting distance is not within the optimum range, you can capture a photo but the object highlight effect will not be applied.
- The object highlight effect cannot be used in dark places.
- The object highlight effect cannot be used with the optical zoom at 3X or higher.
- Digital zoom is not available in Object Highlight mode.
- Use a tripod to prevent camera shake as the camera captures 2 consecutive photos to apply the effect.
- The subject and the background should have a significant contrast in color.
- Subjects should be positioned far away from the background for the greatest effect.
Using the DUAL IS mode

Reduce camera shake and prevent blurred photos with Optical and Digital Image Stabilization functions.

1. In Shooting mode, press [MODE].
2. Select DUAL IS.
3. Align your subject in the frame, and then half-press [Shutter] to focus.
4. Press [Shutter] to take the photo.

- The digital zoom does not work in this mode.
- The camera corrects the photo optically only if the light source is brighter than fluorescent light.
- If your subject is moving rapidly, the photo may be blurry.
- Set the Optical Image Stabilization option to reduce camera shake in different shooting modes. (p. 25)

Using the Night mode

Use the Night mode to take a photo with options for preset for shooting at night. Use a tripod to prevent your camera from shaking.

1. In Shooting mode, press [MODE].
2. Select Scene → Night.
3. Align your subject in the frame, and then half-press [Shutter] to focus.
4. Press [Shutter] to take the photo.

Adjusting the exposure in the Night mode

In Night mode, you can use a slow shutter speed to extend the time until the shutter closes. Increase the aperture value to prevent overexposure.

1. In Shooting mode, press [MODE].
2. Select Scene → Night.
3. Press [MENU].
Shooting modes

5 Select the aperture value or shutter speed.

6 Select an option.
   • If you select AUTO, the camera adjusts the aperture value or shutter speed automatically.

7 Align your subject in the frame, and then half-press [Shutter] to focus.

8 Press [Shutter] to take the photo.

Using the Program mode
In the Program mode, you can set various options except the shutter speed and aperture value, which the camera sets automatically.

1 In Shooting mode, press [MODE].

2 Select Program.

3 Set options.
   (For a list of options, refer to “Shooting options”.)

4 Align your subject in the frame, and then half-press [Shutter] to focus.

5 Press [Shutter] to take the photo.

Use a tripod to prevent your photos from blurring.
Recording a video

In Movie mode, you can record high-definition videos in 1280 X 720 HQ resolution. You can record up to 4 GB (approximately 11 minutes) at 1280 X 720 HQ resolution and the camera saves recorded videos as MJPEG files.

- Some memory cards may not support high definition recording. If this occurs, set a lower resolution. (p. 41)
- Memory cards with slow writing speeds will not support high resolution videos and high-speed videos. To record high-resolution or high-speed videos, use memory cards with faster writing speeds.
- If you have activated the Optical Image Stabilization, the camera may record your video with the sounds the OIS makes when operating.

1. In Shooting mode, press [MODE].
2. Select Movie.
3. Press [MENU].
4. Select Movie → Frame Rate → a frame rate (the number of frames per second).
   - As the frame rate increases, action appears more natural, but the file size also increases.

Depending on the resolution and frame rate, the movie may appear smaller than the original size shown on the main display.

5. Press [MENU].
6. Select Movie → Sound Alive → a sound option.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>🎧</td>
<td>Sound Alive On: Turn on the Sound Alive function.</td>
</tr>
<tr>
<td>🎧</td>
<td>Sound Alive Off: Turn off the Sound Alive function.</td>
</tr>
<tr>
<td>🎤</td>
<td>Mute: Do not record sounds.</td>
</tr>
</tbody>
</table>

7. Set other options as desired. (For options, refer to “Shooting options”.)

- Do not block the microphone when you use the Sound Alive function.
- Recordings made with Sound Alive may differ from actual sounds.
Shooting modes

To pause recording
The camera allows you to pause a video temporarily while recording. With this function, you can record several scenes as a single video.
Press [OK] to pause while recording. Press it again to resume.

Using the Smart Scene Detection mode
In this mode, your camera automatically chooses the appropriate camera settings based on a detected type of scene.

1. In Shooting mode, press [MODE].
2. Select Movie.
3. Press [MENU].
4. Select Movie → Smart Scene Detection → On.
5. Align your subject in the frame.
   - The camera selects a scene automatically. An appropriate mode icon will appear at the top left of the screen.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>🏞️</td>

</tbody>
</table>
## Shooting modes

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>🌅</td>
<td>Appears when recording videos of sunsets.</td>
</tr>
</tbody>
</table>

6 Press **[Shutter]** to start recording.

7 Press **[Shutter]** again to stop recording.

- If the camera does not recognize a proper scene mode, 🌅 will not change and the default settings will be used.
- The camera may not select the correct scene depending on shooting environments, such as camera shake, lighting and distance to the subject.
- In Smart Scene Detection mode, you cannot set smart filter effects.
Recording voice memos

Learn how to record a voice memo that you can play back at any time. You can add a voice memo to a photo as a short reminder of shooting conditions.

You will get the best sound quality when recording 16 inches (40 cm.) away from the camera.

Recording a voice memo

1. In Shooting mode, press [MENU].
2. Select Shooting → Voice → Record.
   - You can record voice memos of up to 10 hours in length.
   - Press [OK] to pause or resume recording.
4. Press [Shutter] to stop.
   - Press [Shutter] again to record a new voice memo.
5. Press [MENU] to switch to Shooting mode.

Adding a voice memo to a photo

1. In Shooting mode, press [MENU].
2. Select Shooting → Voice → Memo.
3. Align your subject in the frame, and then take a photo.
   - Begin recording the voice memo right after taking the photo.
4. Record a short voice memo (10 seconds maximum).
   - Press [Shutter] to stop recording a voice memo before the 10 seconds are up.

You cannot add voice memos to photos if you set Continuous, Motion Capture, or AEB options.

<td>Takes a photo in 2 seconds.</td>
</tr>
<tr>
<td>Double</td>
<td>Takes a photo in 10 seconds, and then takes another 2 seconds later.</td>
</tr>
</tbody>
</table>

The options may differ depending on the shooting mode.

3 Press [Shutter] to start the timer.
   • The AF-assist light/timer lamp blinks. The camera automatically takes a photo at the specified time.

   - Press [ ] to cancel the timer.
   - Depending on the face detection option you have selected, the timer function or some timer options may not be available.
   - When you set burst options, you cannot use the timer function.
Shooting in the dark
Learn how to take photos at night or in low light conditions.

Preventing red-eye
If the flash fires when you take a photo of a person in the dark, a red glow may appear in the person’s eyes. To prevent this, select Red-eye or Red-eye Fix. Refer to flash options in "Using the flash".

Using the flash
Use the flash when taking photos in the dark or when you need more light in your photos.

1 In Shooting mode, press [Flash].

2 Select an option.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| Off:   | The flash does not fire.  
|        | The camera displays the camera shake warning (\(\)) when you are shooting in low light.  
| Auto:  | The camera selects a proper flash setting for the scene it detects in the 
|        | mode.  

Shooting in the dark

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Red-eye Fix</strong>:</td>
<td>- The flash fires twice when the subject or background is dark. The subject should not move until the flash fires a second time.</td>
</tr>
<tr>
<td></td>
<td>- The camera corrects red-eyes through its advanced software analysis.</td>
</tr>
<tr>
<td><strong>Slow Sync</strong>:</td>
<td>- The flash fires and the shutter stays open longer.</td>
</tr>
<tr>
<td></td>
<td>- This option is recommended when you want to capture ambient light to reveal more details in the background.</td>
</tr>
<tr>
<td></td>
<td>- Use a tripod to prevent your photos from blurring.</td>
</tr>
<tr>
<td></td>
<td>- The camera will display the shake warning ((strcmp) when you are shooting in low light.</td>
</tr>
<tr>
<td><strong>Fill in</strong>:</td>
<td>- The flash always fires.</td>
</tr>
<tr>
<td></td>
<td>- The camera adjusts light intensity automatically.</td>
</tr>
<tr>
<td><strong>Red-eye</strong>:</td>
<td>- The flash fires when the subject or background is dark.</td>
</tr>
<tr>
<td></td>
<td>- The camera reduces red-eyes.</td>
</tr>
<tr>
<td><strong>Auto</strong>:</td>
<td>- The flash fires automatically when the subject or background is dark.</td>
</tr>
</tbody>
</table>

The options may differ depending on the shooting mode.

- Flash options are not available if you set burst options or select 
  *Self-Shot* or *Blink Detection*.
- Make sure that your subjects are within the recommended distance from the flash. (p. 102)
- If light from the flash is reflected or there is a large amount of dust in the air, tiny spots may appear in your photo.

### Adjusting the ISO speed

The ISO speed is the measure of a film’s sensitivity to light as defined by the International Organization for Standardization (ISO). The higher ISO speed you select, the more sensitive to light your camera becomes. With a higher ISO speed, you can get a better photo without using the flash.

1. In Shooting mode, press [MENU].
2. Select Shooting → ISO → an option.
   - Select the ISO to use an appropriate ISO speed based on the brightness of the subject and lighting.

- The higher ISO speed you select, the more image noise you may get.
- When you select *Motion Capture*, the camera sets the ISO speed to Auto.
Changing the camera’s focus
Learn how to adjust the camera’s focus.

Using macro
Use macro to take close-up photos of subjects, such as flowers or insects. Refer to macro options in “Using auto focus”.

Using auto focus
To take sharp photos, select the appropriate focus according to your distance from the subject.

1 In Shooting mode, press [ ].

2 Select an option.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal (AF)</td>
<td>Focus on a subject farther than 31.5 in. (80 cm) from the camera. Farther than 79 in. (200 cm) when using the zoom.</td>
</tr>
<tr>
<td>Macro</td>
<td>Focus on a subject 2 in. to 31.5 in. (5 - 80 cm) from the camera. 59 in. to 79 in. (150 cm - 200 cm) when using the zoom.</td>
</tr>
<tr>
<td>Auto Macro</td>
<td>Focus on a subject farther than 2 in. (5 cm). Farther than 59 in. (150 cm) when using the zoom.</td>
</tr>
</tbody>
</table>

The options may differ depending on the shooting mode.

• Try to hold the camera very still to prevent blurry photos.
• Turn off the flash if the distance to the subject is less than 16 in. (40 cm.)
Changing the camera’s focus

Using tracking auto focus
Tracking AF allows you to track and auto focus on your subject, even when you are moving.

1 In Shooting mode, press [MENU].

2 Select Shooting → Focus Area → Tracking AF.

3 Focus on the subject you want to track, and then press [OK].
   - A focus frame appears on the subject and follows the subject as you move the camera.

   - The white frame means that your camera is tracking the subject.
   - The green frame means that your subject is in focus when you half-press [Shutter].

   • If you do not touch any area on the screen, the focus frame will appear in the center of the screen.
   • Tracking a subject may fail when:
     - the subject is too small or the subject moves excessively
     - the subject is backlit or you are shooting in a dark place
     - colors or patterns on the subject and the background are the same
     - the camera shakes excessively
   In these cases, the focus frame appears as a white, single-line frame ( ).
   • If the camera fails to track the subject, you must reselect the subject to track.
   • If the camera fails to fix the focus, the focus frame changes to a red, single-line frame ( ).
   • If you use this function, you cannot set self timer options, Face Detection options and Smart Filter options.
Changing the camera’s focus

Adjusting the focus area 📷 📸 🎥
You can get clearer photos by selecting an appropriate focus area according to your subject’s location in the scene.

1 In Shooting mode, press [MENU].

2 Select **Shooting → Focus Area →** an option.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>

<tbody>
<tr>
<td>📷</td>
<td><strong>Center AF</strong>: Focus on the center. Suitable when subjects are located in the center.</td>
</tr>
<tr>
<td>📷</td>
<td><strong>Multi AF</strong>: Focus on one or more of 9 possible areas.</td>
</tr>
<tr>
<td>📷</td>
<td><strong>Tracking AF</strong>: Focus on and track the subject. (p. 46)</td>
</tr>
</tbody>
</table>

The options may differ depending on the shooting mode.
Using face detection

If you use face detection options, your camera can automatically detect a human face. When you focus on a human face, the camera adjusts the exposure automatically. Take photos quickly and easily by using Blink Detection to detect closed eyes or Smile Shot to capture a smiling face. You can also use Smart Face Recognition to register faces and prioritize the focus on them.

Detecting faces

Your camera automatically detects human faces (up to 10 faces in one scene).

1. In Shooting mode, press [MENU].

2. Select Shooting → Face Detection → Normal.
   - The nearest face appears in a white focus frame and the rest of the faces appear in gray focus frames.
   - The closer you are to the subject, the quicker your camera detects faces.
   - The detected faces may not be registered if you set burst options such as Continuous, Motion Capture, AEB.

- The camera automatically tracks the registered face.
- Face detection may not be effective when:
  - the subject is far from the camera (The focus frame will appear orange for Smile Shot and Blink Detection.)
  - it is too bright or too dark
  - the subject is not facing the camera
  - the subject is wearing sunglasses or a mask
  - the subject is in backlit or the lighting condition is unstable
  - the subject's facial expression changes remarkably
- Face detection is not available when using a smart filter effect, or image adjustment option or when used with Tracking AF.
- Depending on the face detection option you selected, the timer or some timer options are not available.
- Depending on the face detection option you selected, some burst options are not available.
- When you take photos of detected faces, they will be registered in the face list.
- You can view registered faces in order of priority in Playback mode. (p. 63) Even though faces are registered successfully, they may not be classified in Playback mode.
- The detected face in Shooting mode may not appear in the face list or Smart Album.

- The detected faces may not be registered if you set burst options such as Continuous, Motion Capture, AEB.
Using face detection

Taking a self-portrait shot
Take photos of yourself. The camera automatically sets the photo distance to close-up and emits a beep when ready.

1 In Shooting mode, press [MENU].
2 Select Shooting → Face Detection → Self-Shot.
3 When you hear a beep, press [Shutter].

If you turn Volume off in the sound settings, the camera will not emit a beep. (p. 85)

Taking a smile shot
The camera automatically releases the shutter when it detects a smiling face.

1 In Shooting mode, press [MENU].
2 Select Shooting → Face Detection → Smile Shot.
   • When your subject smiles broadly, your camera can detect the smile more easily.
Detecting eye blinking
If your camera detects closed eyes, it automatically takes two photos in succession.

1. In Shooting mode, press [MENU].
2. Select Shooting → Face Detection → Blink Detection.
   - Hold your camera still while "Capturing" is displayed on the screen.
   - When blink detection fails, the "Picture taken with eyes closed." message appears. Take another photo.

Using smart face recognition
The camera automatically registers faces that you frequently photograph (up to 10 people). This feature will automatically prioritize the focus on those faces. This feature is available only when you use a memory card.

1. In Shooting mode, press [MENU].
2. Select Shooting → Face Detection → Smart Face Recognition.
   - The nearest face appears in a white focus frame and the rest of the faces appear in gray focus frames.
   - : Indicate favorite faces (To register favorite faces, see page 51).
   - : Indicate faces that the camera automatically registers.
Using face detection

• The camera may recognize and register faces incorrectly depending on lighting conditions, remarkable changes in the subject’s pose or face, and whether or not the subject is wearing glasses.
• The camera can automatically register up to 12 faces. If the camera recognizes a new face when there are 12 registered faces, it will replace the face in the lowest priority with the new one.
• The camera can detect up to 5 faces in one scene.

Registering faces as your favorites (My Star)

You can register your favorite faces to prioritize the focus and exposure on those faces. This feature is available only when you use a memory card.

1 In Shooting mode, press [MENU].
2 Select Shooting → Smart FR Edit → My Star.
3 Align your subject’s face with the oval guideline and press [Shutter] to register the face.

• If the subject’s face is not aligned with the oval guideline, the white frame will not appear.
• You can take photos of a subject’s face directly from the front, to the left side, to the right side, from above, or from below.
• Take photos of one person at a time when registering faces.
Using face detection

4 When you are finished taking the photos, the face list appears.
   • Your favorite faces are indicated with a ★ on the face list.

- You can register up to 8 favorite faces.
- The flash option will be set to Off.
- If you register the same face twice, you can delete one of the faces in the face list.

Viewing your favorite faces

1 In Shooting mode, press [MENU].

2 Select Shooting → Smart FR Edit → Face List.

- To change the ranking of the favorite faces, press [Fn] and select Edit Ranking. (p. 63)
- To cancel the favorite faces, press [Fn] and select Delete. (p. 63)
Adjusting brightness and color

Learn how to adjust the brightness and color for better image quality.

Adjusting the exposure manually (EV) 📸 🌞 🌮

Depending on the intensity of the ambient light, your photos may be too bright or dark. In these cases, you can adjust the exposure to get a better photo.

1. In Shooting mode, press [MENU].
2. Select **Shooting** or **Movie** → **EV**.
3. Select a value to adjust the exposure.

- Once you adjust the exposure, the setting will remain the same. You may need to change the exposure value later to avoid overexposure or underexposure.
- If you cannot decide on an appropriate exposure, select **AEB** (Auto Exposure Bracket). The camera takes three photos, each with a different exposure: normal, underexposed, and overexposed. (p. 56)

Compensating for backlighting (ACB) 📸

When the light source is behind your subject or there is high contrast between your subject and the background, your subject is likely to appear dark in the photo. If this occurs, turn the Auto Contrast Balance (ACB) option on.

Without ACB 📸 With ACB 📸

1. In Shooting mode, press [MENU].
2. Select **Shooting** → **ACB** → an option.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>📸Off</td>
<td>Off: ACB is off.</td>
</tr>
<tr>
<td>📸On</td>
<td>On: ACB is on.</td>
</tr>
</tbody>
</table>

The ACB feature is not available when you set **Continuous**, **Motion Capture**, **AEB** options.
Adjusting brightness and color

Changing the metering option  

The metering mode refers to the way in which a camera measures the quantity of light. The brightness and lighting of your photos will vary depending on the metering mode you select.

1. In Shooting mode, press [MENU].
2. Select Shooting or Movie → Metering → an option.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| Multi:          | • Your camera divides the scene into several areas, and then measures the light intensity of each area.  
|                 | • Suitable for general photos.                                             |
| Spot:           | • Your camera measures only the light intensity of the very center of the frame.  
|                 | • If a subject is not in the center of the scene, your photo may be improperly exposed.  
|                 | • Suitable for a subject with backlighting.                                |
| Center-weighted | • Your camera averages the meter reading of the entire frame with emphasis placed on the center.  
|                 | • Suitable for photos with subjects in the center of the frame.             |

Selecting a light source  

(White balance)  

The color of your photo depends on the type and quality of the light source. If you want the color of your photo to be realistic, select a white balance setting that matches the lighting conditions, such as Daylight, Cloudy, or Tungsten.
Adjusting brightness and color

1 In Shooting mode, press [MENU].

2 Select Shooting or Movie → White Balance → an option.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Auto WB" /></td>
<td>Auto WB: Automatically sets the white balance based on the lighting conditions.</td>
</tr>
<tr>
<td><img src="image" alt="Daylight" /></td>
<td>Daylight: Select when taking outdoor photos on a sunny day.</td>
</tr>
<tr>
<td><img src="image" alt="Cloudy" /></td>
<td>Cloudy: Select when taking outdoor photos on a cloudy day or in shadows.</td>
</tr>
<tr>
<td><img src="image" alt="Fluorescent_H" /></td>
<td>Fluorescent_H: Select when shooting under a daylight fluorescent or three-way fluorescent light.</td>
</tr>
<tr>

</tr>
<tr>
<td><img src="image" alt="Tungsten" /></td>
<td>Tungsten: Select when taking indoor photos under incandescent bulbs or halogen lamps.</td>
</tr>
<tr>
<td><img src="image" alt="Measure: Shutter" /></td>
<td>Measure: Shutter (Custom Set): Use white balance settings you defined. (See procedure at right.)</td>
</tr>
</tbody>
</table>

Defining your own white balance

1 In Shooting mode, press [MENU].

2 Select Shooting or Movie → White Balance → Measure: Shutter (Custom Set).

3 Aim the lens at a piece of white paper.

4 Press [Shutter].
Using burst modes

It can be difficult to take photos of fast-moving subjects or capture natural facial expressions and gestures of your subjects in photos. In these cases, select one of the burst modes to take multiple pictures rapidly.

1. In Shooting mode, press [MENU].
2. Select Shooting → Drive → an option.

<table>

<td>Adjust the volume level.</td>
</tr>
</tbody>
</table>

Adding a voice memo to a photo

1. In Playback mode, select a photo, and then press [MENU].
2. Select File Options → Voice memo → On.
3. Press [Shutter] to record a short voice memo (10 seconds maximum).
   - Press [Shutter] to stop recording a voice memo.

You cannot add a voice memo to protected files.

Playing a voice memo added to a photo

In Playback mode, select a photo that includes a voice memo, and then press [OK].
- Press [OK] to pause or resume playback.
Editing a photo

Perform photo editing tasks, such as resizing, rotating, eliminating red-eyes, and adjusting brightness, contrast, or saturation.

- The camera saves edited photos as new files.
- When you edit photos, the camera will automatically convert them to a lower resolution. Photos that you rotate or resize manually are not automatically converted to a lower resolution.

Resizing photos

1. In Playback mode, select a photo, and then press [MENU].
2. Select Edit → Resize → an option.
   - Select to save the photo as a start image. (p. 85)

Rotating a photo

1. In Playback mode, select a photo, and then press [MENU].
2. Select Edit → Rotate → an option.

The rotated photo will be saved as the same file, not a new file.

Available options differ depending on the size of the selected photo.
Applying smart filter effects
Apply various filter effects to your photos to create unique images.

1. In Playback mode, select a photo and press [MENU].
2. Select Edit → Smart Filter.
3. Select an effect.

<table>

</table>
Editing a photo

Defining your own RGB tone

1. In Playback mode, select a photo, and then press [MENU].
2. Select Edit → Smart Filter → Custom RGB.
3. Select a color (R: Red, G: Green, B: Blue).
4. Adjust the amount of the selected color. (-: less or +: more)

Correcting exposure problems

Adjust ACB (Auto Contrast Balance), brightness, contrast, or saturation; remove red-eye; hide facial imperfections; or add noise to the photo.

Adjusting ACB (Auto Contrast Balance)

1. In Playback mode, select a photo, and then press [MENU].
2. Select Edit → Image Adjust → ACB.

Removing red-eye

1. In Playback mode, select a photo, and then press [MENU].
2. Select Edit → Image Adjust → Red-eye Fix.
Editing a photo

Hiding facial imperfections

1 In Playback mode, select a photo, and then press [MENU].

2 Select Edit → Image Adjust → Face Retouch.

3 Select a level.
   • As the number increases, the face becomes clearer.

Adjusting brightness/contrast/saturation

1 In Playback mode, select a photo, and then press [MENU].

2 Select Edit → Image Adjust.

3 Select an adjustment option.
   • ☀: Brightness
   • ☞: Contrast
   • ☿: Saturation

4 Select a value to adjust the selected item.
   (-: less or +: more)

Adding noise to the photo

1 In Playback mode, select a photo, and then press [MENU].

2 Select Edit → Image Adjust → Add Noise.
Creating a print order (DPOF)
Select photos to be printed and set options, such as the number of copies or paper size.

- You can take the memory card to a print shop that supports DPOF (Digital Print Order Format) or you can print photos directly through a DPOF-compatible printer at home.
- Wide photos may print with the left and right edges cut off, so be aware of the dimensions of your photos.
- You cannot set the DPOF for the photos stored in the internal memory.

1 In Playback mode, press [MENU].
2 Select File Options → DPOF → Standard → an option.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>

</tbody>
</table>

6 If you select Select, scroll to a photo, and then rotate [Zoom] left or right to select the print size. Repeat for the photos you want to print, and then press [Fn].
- If you select All, press [DISP] or [OK] to select the print size, and then press [OK].

Printing photos as thumbnails
Print photos as thumbnails to check all the photos at once.

1 In Playback mode, press [MENU].
2 Select File Options → DPOF → Index → Yes.

- If you specify the print size, you can print photos only with DPOF 1.1-compatible printers.
Viewing files on a TV

Play back photos or videos by connecting your camera to a TV using the A/V cable.

1. In Shooting or Playback mode, press [MENU].

2. Select Settings → Video Out.

3. Select a video signal output according to your country or region.

4. Turn off your camera and TV.

5. Connect your camera to your TV using the A/V cable.

6. Turn on your TV, and then select the video output mode using the TV remote control.

7. Turn on your camera, and then press [ ].

8. View photos or play videos using the buttons on your camera.

- On some TVs, digital noise may occur or part of an image may not appear.
- Images may not appear centered on the TV screen depending on your TV settings.
- You can capture photos or videos while the camera is connected to a TV.
Transferring files to your Windows computer

Transfer files to your computer using the built-in Intelli-studio program. You can also edit files or upload files to your favorite websites.

**Requirements for Intelli-studio**

<table>
<thead>
<tr>
<th>Item</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>CPU</td>
<td>Intel Pentium 4, 3.2 GHz or higher/AMD Athlon™ FX 2.6 GHz or higher</td>
</tr>
<tr>
<td>RAM</td>
<td>Minimum 512 MB RAM (1 GB and above recommended)</td>
</tr>
<tr>
<td>OS</td>
<td>Windows XP SP2/Vista/7</td>
</tr>
<tr>
<td>Hard disk capacity</td>
<td>250 MB or more (1 GB or more recommended)</td>
</tr>
<tr>
<td>Others</td>
<td>• CD-ROM drive</td>
</tr>
<tr>
<td></td>
<td>• nVIDIA GeForce 7600GT or higher/ATI X1600 series or higher</td>
</tr>
<tr>
<td></td>
<td>• 1024 x 768 pixels, 16-bit color display compatible monitor (1280 x 1024 pixels, 32-bit color display recommended)</td>
</tr>
<tr>
<td></td>
<td>• USB 2.0 port, Microsoft DirectX 9.0c or later</td>
</tr>
</tbody>
</table>

- Intelli-studio may not perform correctly on some computers, even when the computer meets the requirements.
- If your computer does not meet the requirements, videos may not play correctly or it may take longer to edit videos.
- Install DirectX 9.0c or above before you use the program.
- Your computer must have Windows XP/Vista/7 or Mac OS 10.4 or later for you to connect the camera to the computer as a removable disk.

Using a self-assembled PC or a PC and OS that are not supported may void your warranty.
Transferring files to your Windows computer

Transferring files using Intelli-studio
Intelli-studio will start automatically when you connect the camera to your computer with the USB cable.

1. In Shooting or Playback mode, press [MENU].
2. Select Settings → PC Software → On.
3. Turn off the camera.
4. Connect the camera to your computer with the USB cable.
   - You must plug the end of the cable with the indicator light (▲) into your camera. If the cable is reversed, it may damage your files. The manufacturer is not responsible for any loss of data.
5. Turn on the camera.
   - The computer recognizes the camera automatically and Intelli-studio launches automatically.
     - If you set the USB option to Select Mode, select Computer from the pop-up window.
6. Select a folder on your computer to save new files to.
   - If your camera has no new files, the pop-up window for saving new files will not appear.
7. Select Yes.
   - New files are transferred to the computer.
     - For Windows 7, Windows Vista, select Run iStudio.exe from the AutoPlay window.

The battery charges while the camera is connected to a computer with the USB cable.
Transferring files to your Windows computer

**Using Intelli-studio**

Intelli-studio is a built-in program that allows you to play back and edit files. You can also upload files to websites, such as Flickr or YouTube. For details, select Help → Help in the program.

- To enjoy more features, such as creating slide shows with templates, install the full version of Intelli-studio by selecting Web Support → Update Intelli-studio → Start Update from the program toolbar.
- You can update the firmware of your camera by selecting Web Support → Upgrade firmware for the connected device from the program toolbar.
- If you install Intelli-studio on your computer, the program launches more quickly. To install the program, select Tool → Install Intelli-studio on PC.
- You cannot edit files directly on the camera. Transfer files to a folder on your computer before editing.
- Intelli-studio supports the following formats:
  - Videos: MP4 (Video: H.264, Audio: AAC), WMV (WMV 7/8/9), AVI (MJPEG)
  - Photos: JPG, GIF, BMP, PNG, TIFF
Transferring files to your Windows computer

Transferring files by connecting the camera as a removable disk

Connect the camera to your computer as a removable disk.

1. In Shooting or Playback mode, press [MENU].
2. Select Settings → PC Software → Off.
3. Turn off the camera.
4. Connect the camera to your computer with the USB cable.

You must plug the end of the cable with the indicator light (▲) into your camera. If the cable is reversed, it may damage your files. The manufacturer is not responsible for any loss of data.

</tbody>
</table>
5 Turn on the camera.
   • The computer recognizes the camera automatically.

   If you set the USB option to **Select Mode**, select **Computer** from the pop-up window.

6 On your computer, select **My Computer → Removable Disk → DCIM → 100PHOTO**.

7 Select the files you want and drag or save them to your computer.

---

**Disconnected the camera (for Windows XP)**

The way to disconnect the USB cable for Windows Vista/7 is similar.

1. If the status lamp on your camera is blinking, wait until it stops.

2. Click the tool bar at the bottom right of your PC screen.

3. Click the pop-up message.

4. Click the message box indicating safely removed.

5. Remove the USB cable.

   *The camera may not be removed safely when Intelli-studio is running. End the program before disconnecting the camera.*
**Transferring files to your Mac computer**

When you connect the camera to a Macintosh computer, the computer recognizes the camera automatically. You can transfer files directly from the camera to the computer without installing any programs.

- **Mac OS 10.4 or later is supported.**

1. Connect your camera to a Macintosh computer with the USB cable.
   - You must plug the end of the cable with the indicator light (▲) into your camera. If the cable is reversed, it may damage your files. The manufacturer is not responsible for any loss of data.

2. Turn on the camera.
   - The computer recognizes the camera automatically and displays a removable disk icon.
   - If you set the USB option to **Select Mode**, select **Computer** from the pop-up window.

3. Double-click the removable disk icon.

4. Transfer photos or videos to the computer.
Printing photos with a PictBridge photo printer

Print photos with a PictBridge-compatible printer by connecting your camera directly to the printer.

1. In Shooting or Playback mode, press [MENU].
2. Select Settings → USB.
3. Select Printer.
4. With the printer on, connect your camera to the printer with the USB cable.

5. Turn on your camera.
   - The printer recognizes the camera automatically.
6. Press [ Thumbnail ] or [ Index ] to select a photo.
   - Press [ MENU ] to set printing options. See “Configuring print settings”.

Configuring print settings

</tbody>
</table>

Some options are not supported by some printers.

In Shooting or Playback mode, press [ MENU ].
Select Settings → USB.
Select Printer.
With the printer on, connect your camera to the printer with the USB cable.

Turn on your camera.
- The printer recognizes the camera automatically.

Press [ Thumbnail ] or [ Index ] to select a photo.
- Press [ MENU ] to set printing options. See “Configuring print settings”.

Press [ OK ] to print.

Camera maintenance

Cleaning your camera

Camera lens and display
Use a blower brush to remove dust, and then wipe the lens gently with a soft cloth. If any dust remains, apply lens cleaning liquid to a piece of lens cleaning paper, and then wipe gently.

Camera body
Wipe gently with a soft, dry cloth.

- Never use benzene, thinners, or alcohol to clean the device. These solutions can damage the camera or cause it to malfunction.
- Do not press on the lens cover or use a blower brush on the lens cover.
Using or storing the camera

Inappropriate places to use or store the camera

- Avoid exposing the camera to very cold or very hot temperatures.
- Avoid using your camera in areas with extremely high humidity, or where the humidity changes drastically.
- Avoid exposing the camera to direct sunlight and storing it in hot, poorly-ventilated areas, such as in a car during summer time.
- Protect your camera and the display from impact, rough handling, and excessive vibration to avoid serious damage.
- Avoid using or storing your camera in dusty, dirty, humid, or poorly-ventilated areas to prevent damage to moving parts and internal components.
- Do not use your camera near fuels, combustibles, or flammable chemicals. Do not store or carry flammable liquids, gases, or explosive materials in the same compartment as the camera or its accessories.
- Do not store the camera where there are mothballs.

Using on beaches or shores

- Protect your camera from sand and dirt when you use it on beaches or in other similar areas.
- Your camera is not waterproof. Do not handle the battery, adapter, or memory card with wet hands. Operating the camera with wet hands may cause damage to your camera.

Storing for extended period of time

- When you store the camera for an extended period, place it in a sealed container with an absorbent material, such as silica gel.
- Remove the batteries from your camera when storing it for an extended period. Installed batteries may leak or corrode over time and cause serious damage to your camera.
- Over time, unused batteries will discharge and must be recharged before use.

Use the camera with caution in humid environments

When you transfer the camera from a cold environment to a warm one, condensation can form on the lens or internal components of the camera. In this situation, turn off the camera and wait for at least 1 hour. If condensation forms on the memory card, remove the memory card from the camera and wait until all moisture has evaporated before reinserting it.
Camera maintenance

Other cautions

- Do not swing your camera by the strap. This may cause injury to yourself or others or damage to your camera.
- Do not paint your camera, as paint can clog moving parts and prevent proper operation.
- Turn off the camera while not in use.
- Your camera consists of delicate parts. Avoid impacts to the camera.
- Protect the display from external force by keeping it in the case when not in use. Protect the camera from scratches by keeping it away from sand, sharp implements, or loose change.
- Do not expose the lens to direct sunlight, as this may discolor the image sensor or cause it to malfunction.
- Protect your lens from fingerprints and scratches. Clean your lens with a soft, clean, debris-free lens cloth.
- The camera may turn off if impacted from the outside. This is to protect the memory card. Turn on the camera to use it again.
- While you use the camera, it may heat up. This is normal and should not affect your camera’s lifespan or performance.
- When you use the camera in low temperatures, it may take some time to turn on, the color may be changed temporarily, or after-images may appear. These conditions are not malfunctions and they will correct themselves when the camera is returned to normal temperatures.
- Paint or metal on the outside of the camera may cause allergies, itchy skin, eczema, or swelling for people with sensitive skin. If you experience any of these symptoms, stop using the camera immediately and consult a doctor.
- Do not insert foreign objects into any of your camera's compartments, slots, or access points. Damage due to improper use may not be covered by your warranty.
- Do not allow unqualified personnel to service the camera or attempt to service the camera yourself. Any damage that results from unqualified service is not covered by your warranty.

About memory cards

Supported memory cards

Your camera supports microSD (Secure Digital) or microSDHC (Secure Digital High Capacity) memory cards.

To read data with a PC or memory card reader, insert the memory card into a memory card adapter.
Camera maintenance

**Memory card capacity**

The memory capacity may differ depending on the scenes you shoot or the shooting conditions. These capacities are based on a 1 GB microSD card:

* Available recording time may vary if you use the zoom. Several videos were recorded in succession to determine the total recording time.

**Cautions when using memory cards**

- Insert a memory card in the correct direction. Inserting a memory card in the wrong direction may damage your camera and memory card.
- Do not use memory cards that have been formatted by other cameras or by a computer. Reformat the memory card with your camera.
- Turn off the camera when you insert or remove the memory card.
- Do not remove the memory card or turn off your camera while the lamp is blinking, as this may damage your data.
- When the lifespan of a memory card has expired, you cannot store any more photos on the card. Use a new memory card.
- Do not bend, drop, or subject memory cards with heavy impact or pressure.
- Avoid using or storing memory cards near strong magnetic fields.
- Avoid using or keeping memory cards in areas with high temperature, high humidity, or corrosive substances.
- Prevent memory cards from making contact with liquids, dirt, or foreign substances. If dirty, wipe the memory card clean with a soft cloth before you insert the memory card in your camera.
- Do not allow liquids, dirt, or foreign substances to come in contact with memory cards or the memory card slot. Doing so may cause memory cards or the camera to malfunction.
- When you carry a memory card, use a case to protect the card from electrostatic discharges.
Camera maintenance

- Transfer important data to other media, such as a hard disk, CD, or DVD.
- When you use the camera for an extended period, the memory card may become warm. This is normal and does not indicate a malfunction.

The manufacturer is not responsible for any loss of data.

About the battery
Use only Samsung-approved batteries.

- The figures above are based on Samsung’s standards. Your results may differ depending on your actual usage.
- Several videos were recorded in succession to determine the total recording time.
Camera maintenance

Low battery message
When the battery charge has fully discharged, the battery icon will turn red and the 'Low Battery' message will appear.

Notes about using the battery
- Avoid exposing batteries or memory cards to very cold or very hot temperatures (below 0º C/32º F or above 40º C/104º F). Extreme temperatures can reduce the charging capacity of your batteries and can cause memory cards to malfunction.
- When you use the camera for an extended period, the area around the battery chamber may become warm. This does not affect the normal use of the camera.
- Do not pull the power supply cord to disconnect the plug from the power outlet, as this may cause a fire or electric shock.
- In temperatures below 0 º C, battery capacity and battery life may decrease.
- Battery capacity may decrease in low temperatures but will return to normal in milder temperatures.

Cautions about using the battery
Protect batteries, chargers, and memory cards from damage
Prevent batteries from making contact with metal objects, as this can create a connection between the + and – terminals of your battery and lead to temporary or permanent battery damage and may cause a fire or electric shock.

Notes about charging the battery
- If the indicator light is off, make sure that the battery is inserted correctly.
- If the camera is on while charging, the battery may not fully charge. Turn off the camera before charging the battery.
- Do not use your camera when you charge the battery. This may cause a fire or electric shock.
- Do not pull the power supply cord to disconnect the plug from the power outlet, as this may cause a fire or electric shock.
- Wait to turn on the camera until after the battery has charged for at least 10 minutes.
- If you connect the camera to an external power source while the battery is depleted, using some high energy-consuming functions will cause the camera to turn off. To use the camera normally, recharge the battery.
- Using the flash or recording videos depletes the battery quickly. Charge the battery until the indicator light turns green.
Camera maintenance

• If the indicator light blinks in orange or does not illuminate, reconnect the cable, or remove the battery and insert it again.
• If you charge the battery when the cable is overheated or the temperature is too high, the indicator light may turn orange. Charging will start when the battery cools down.
• Overcharging batteries may shorten battery life. After charging is finished, disconnect the cable from your camera.
• Do not bend or place heavy objects on the AC cable. Doing so may damage the cable.

Notes about charging with a computer connected
• Use only the provided USB cable.
• The battery may not charge when:
  - you use a USB hub
  - other USB devices are connected to your computer
  - you connect the cable to the port on the front side of your computer
  - the USB port of your computer does not support the power output standard (5V, 500mA)

Handle and dispose of batteries and chargers with care
• Never dispose of batteries in a fire. Follow all local regulations when you dispose of used batteries.
• Never place batteries or cameras on or in heating devices, such as microwave ovens, stoves, or radiators. Batteries may explode when they are overheated.
Camera maintenance

Personal injury or death can occur if the battery is handled carelessly or improperly. For your safety, follow these instructions for proper battery handling:

- The battery can ignite or explode if not handled properly. If you notice any deformities, cracks, or other abnormalities in the battery, immediately discontinue use of the battery and contact a service center.
- Use only authentic, manufacturer-recommend battery chargers and adapters and charge the battery only by the methods described in this user manual.
- Do not place the battery near heating devices or expose it to excessively warm environments, such as the inside of an enclosed car in the summertime.
- Do not place the battery in a microwave oven.
- Avoid storing or using the battery in hot, humid places, such as spas or shower enclosures.
- Do not rest the device on flammable surfaces, such as bedding, carpets, or electric blankets for a prolonged period.
- When the device is switched on, do not leave it in any confined space for a prolonged period.
- Do not allow the battery terminals to come in contact with metallic objects, such as necklaces, coins, keys, or watches.
- Use only authentic, manufacturer-recommended, Lithium-ion replacement batteries.

- Do not disassemble or puncture the battery with any sharp object.
- Avoid exposing the battery to high pressure or crushing forces.
- Avoid exposing the battery to major impacts, such as dropping it from high places.
- Do not expose the battery to temperatures of 60 °C (140° F) or above.
- Do not allow the battery to come in contact with moisture or liquids.
- Do not expose the battery to direct sunlight, fire, or any other source of excessive heat.

Disposal guidelines

- Dispose of the battery with care.
- Do not dispose of the battery in a fire.
- Disposal regulations may differ by country or region. Dispose of the battery in accordance with all local and federal regulations.

Guidelines for charging the battery

Charge the battery only by the method described in this user manual. The battery can ignite or explode if not charged properly.
Before contacting a service center

If you are having trouble with your camera, try these troubleshooting procedures before contacting a service center. If you have attempted the troubleshooting solution and are still having problems with your device, contact your local dealer or service center.

When you leave your camera at a service center, be sure to also leave the other components that may have contributed to the malfunction, such as the memory card and battery.

| Your computer cannot play videos | • Depending on the video player programs installed on your PC, video files captured by your camera may not play. To ensure the video files play on your computer, install and use the Intelli-studio. (p. 78)  
• Make sure that the USB cable is connected correctly. |
| Intelli-studio is not functioning properly | • End Intelli-studio and restart the program.  
• You cannot use Intelli-studio on Macintosh computers.  
• Make sure that the **PC Software** is set to **On** in the settings menu. (p. 88)  
• Depending on your computer’s specification and environments, the program may not launch automatically. In this case, click **Start** → **My Computer** → **Intelli-studio** → **iStudio.exe** on your computer. |
## Camera specifications

### Image sensor
- **Type**: 1/2.3" (Approx. 7.76 mm) CCD
- **Effective pixels**: Approx. 14.2 mega-pixels
- **Total pixels**: Approx. 14.5 mega-pixels

### Lens
- **Focal length**: Samsung 10X Zoom Lens f = 4.85 - 48.5 mm (35 mm film equivalent: 27 - 270 mm)
- **F-stop range**: F3.3 (W) - F5.9 (T)
- **Digital zoom**:
  - Still image mode: 1.0X - 5.0X (Optical x Digital: 50.0X)
  - Play mode: 1.0X - 13.5X (depending on image size)
- **Intelli Zoom**: 1.0X - 2.0X

### Display
- **Type**: TFT LCD
- **Feature**: 3.0" (7.62 cm), 230 K

### Focusing
- **Type**: TTL auto focus (Multi AF, Center AF, Face Detection AF, Object Tracking AF, Smart Face Recognition AF), Movie AF (CAF)

### Shutter speed
- **Smart Auto**: 1/8 - 1/2,000 sec.
- **Program**: 1 - 1/2,000 sec.
- **Night**: 8 - 1/2,000 sec.

### Exposure
- **Control**: Program AE
- **Metering**: Multi, Spot, Center-weighted, Face Detection AE
- **Compensation**: ±2EV (1/3EV steps)
- **ISO equivalent**: Auto, 80, 100, 200, 400, 800, 1600, 3200 (Full Size)

### Flash
- **Mode**: Off, Auto, Red-eye, Fill in, Slow Sync, Red-eye Fix
- **Range**:
  - WIDE: 0.3 m - 3.3 m (ISO Auto)
  - TELE: 0.5 m - 1.8 m (ISO Auto)
- **Recharging time**: Approx. 4 sec. (depending on battery condition)

Specifications are subject to change without prior notice.
Glossary

ACB (Auto Contrast Balance)
This feature automatically improves the contrast of your images when the subject is backlit or when there is a high contrast between your subject and the background.

AEB (Auto Exposure Bracket)
This feature automatically captures several images at different exposures to help you capture a properly-exposed image.

AF (Auto Focus)
A system that automatically focuses the camera lens on the subject. Your camera uses the contrast to focus automatically.

Aperture
The aperture controls the amount of light that reaches the camera’s sensor.

Camera shake (Blur)
If the camera is moved while the shutter is open, the entire image may appear blurred. This occurs more often when the shutter speed is slow. Prevent camera shake by raising the sensitivity, using the flash, or using a faster shutter speed. Alternately, use a tripod, the DIS or OIS function to stabilize the camera.

Composition
Composition in photography means arranging objects in a photo. Usually, abiding by the rule of thirds leads to a good composition.

DCF (Design rule for Camera File system)
A specification to define a file format and file system for digital cameras created by the Japan Electronics and Information Technology Industries Association (JEITA).

Depth of field
The distance between the nearest and farthest points that can be acceptably focused in a photograph. Depth of field varies with lens aperture, focal length, and distance from the camera to the subject. Selecting a smaller aperture, for example, will increase the depth of field and blur the background of a composition.

Digital zoom
A feature that artificially increases the amount of zoom available with zoom lens (optical zoom). When using the digital zoom, the image quality will deteriorate as the magnification increases.

DPOF (Digital Print Order Format)
A format for writing printing information, such as selected images and number of prints, on a memory card. DPOF-compatible printers, sometimes available at photo shops, can read the information from the card for convenient printing.

EV (Exposure Value)
All the combinations of the camera’s shutter speed and lens aperture that result in the same exposure.
EV Compensation
This feature allows you to quickly adjust the exposure value measured by the camera, in limited increments, to improve the exposure of your photos. Set the EV compensation to -1.0 EV to adjust the value one step darker and 1.0 EV to one step brighter.

Exif (Exchangeable Image File Format)
A specification to define an image file format for digital cameras created by the Japan Electronic Industries Development Association (JEIDA).

Exposure
The amount of light allowed to reach the camera’s sensor. Exposure is controlled by a combination of the shutter speed, the aperture value, and ISO sensitivity.

Flash
A speed light that helps to create adequate exposure in low-light conditions.

Focal length
The distance from the middle of the lens to its focal point (in millimeters). Longer focal lengths result in narrower angles of view and the subject is magnified. Shorter focal lengths result in wider angles of view.

Image sensor
The physical part of a digital camera that contains a photosite for each pixel in the image. Each photosite records the brightness of the light that strikes it during an exposure. Common sensor types are CCD (Charge-coupled Device) and CMOS (Complementary Metal Oxide Semiconductor).

ISO sensitivity
The sensitivity of the camera to light, based on the equivalent film speed used in a film camera. At higher ISO sensitivity settings, the camera uses a higher shutter speed, which can reduce blur caused by camera shake and low light. However, images with high sensitivity are more susceptible to noise.

JPEG (Joint Photographic Experts Group)
A lossy method of compression for digital images. JPEG images are compressed to reduce their overall file size with minimal deterioration of the image resolution.

LCD (Liquid Crystal Display)
A visual display commonly used in consumer electronics. This display needs a separate backlight, such as CCFL or LED, to reproduce colors.

Macro
This feature allows you to capture close-up photos of very small objects. When using the macro feature, the camera can maintain a sharp focus on small objects at a near life-size ratio (1:1).
Glossary

Metering
The metering refers to the way in which the camera measures the quantity of light to set the exposure.

MJPEG (Motion JPEG)
A video format which is compressed as a JPEG image.

Noise
Misinterpreted pixels in a digital image that may appear as misplaced or random, bright pixels. Noise usually occurs when photos are shot with a high sensitivity or when a sensitivity is automatically set in a dark place.

Optical zoom
This is a general zoom which can enlarge images with a lens and does not deteriorate quality of images.

Quality
An expression of the rate of compression used in a digital image. Higher quality images have a lower rate of compression, which usually results in a larger file size.

Resolution
The number of pixels present in a digital image. High resolution images contain more pixels and typically show more detail than low resolution images.

Shutter speed
Shutter speed refers to the amount of time it takes to open and close the shutter, and it is an important factor in the brightness of a photo, as it controls the amount of light which pass through the aperture before it reaches the image sensor. A fast shutter speed allows less time to let light in and the photo becomes darker and more easily freezes subjects in motion.

Vignetting
A reduction of an image's brightness or saturation at the periphery (outer edges) compared to the center of the image. Vignetting can draw interest to subjects positioned in the center of an image.

White balance (color balance)
An adjustment of the intensities of colors (typically the primary colors red, green, and blue), in an image. The goal of adjusting the white balance, or color balance, is to correctly render the colors in an image.
Correct Disposal of This Product
(Waste Electrical & Electronic Equipment)
(Applicable in the European Union and other European countries with separate collection systems)

This marking on the product, accessories or literature indicates that the product and its electronic accessories (e.g. charger, headset, USB cable) should not be disposed of with other household waste at the end of their working life. To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate these items from other types of waste and recycle them responsibly to promote the sustainable reuse of material resources. Household users should contact either the retailer where they purchased this product, or their local government office, for details of where and how they can take these items for environmentally safe recycling. Business users should contact their supplier and check the terms and conditions of the purchase contract. This product and its electronic accessories should not be mixed with other commercial wastes for disposal.

Correct disposal of batteries in this product
(Applicable in the European Union and other European countries with separate battery return systems)

This marking on the battery, manual or packaging indicates that the batteries in this product should not be disposed of with other household waste at the end of their working life. Where marked, the chemical symbols Hg, Cd or Pb indicate that the battery contains mercury, cadmium or lead above the reference levels in EC Directive 2006/66. If batteries are not properly disposed of, these substances can cause harm to human health or the environment.

To protect natural resources and to promote material reuse, please separate batteries from other types of waste and recycle them through your local, free battery return system.

This Class [B] digital apparatus complies with Canadian ICES-003.

PlanetFirst represents Samsung Electronics' commitment to the sustainable development and social responsibility through eco-driven business and management activities.
• NOTE:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorientate, or relocate, the receiving antenna.
- Increase the distance between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio / TV technician for help.

• CAUTION:
Changes or modifications not expressly approved by the manufacturer responsible for compliance could void the user’s authority to operate the equipment.

• Declaration of Conformity
Trade Name : Samsung Electronics America, Inc.
Model No. : Samsung PL210
Responsible Party : Samsung Electronics America, Inc.
Address : 85 Challenger Road, Ridgefield Park, NJ 07660
Telephone No. : 1-800-SAMSUNG (726-7864)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
